WORK EXPERIENCE

Software Engineer — Chubb — Ignite Underwriting Platform April 2025 – Present | Thessaloniki, Greece

Enterprise platform development — Java, JavaScript, PostgreSQL, Mendix, Low-Code)

- Deliver full-stack features on Chubb's Ignite E-Trade and Underwriting platform.
- Extend platform capabilities with custom Java actions, JavaScript, and PostgreSQL data modelling.
- Own features end-to-end: implementation, testing, and deployment through SIT and UAT environments.
- Partner with Business Analysts to refine business requirements into feasible implementation plans.
- Participate in on-call rotation and releases; diagnose incidents and deploy production hotfixes.
- Collaborate cross-functionally with multiple teams on shared platform architecture and integrations.

Software Engineer — CERTH (Centre for Research & Technology Hellas) July 2020 – April 2025 | Thessaloniki, Greece

Autodesk Revit Plugin — .NET, C#, WPF, Docker

Custom Assembly Design and Management

- Created a custom 2D drawing canvas supporting drawing, erasing, measuring, and zoom in/out.
- Introduced a state machine to manage the various states of the canvas.
- Containerized and maintained the ASP.NET Core backend and MSSQL database with Docker.

Windows Desktop Application — .NET, C#, WPF, MVVM, Node

Creator for worker training and user manuals for industrial settings

- Maintained and improved a complex, undocumented .NET WPF Windows desktop application.
- Implemented the MVVM pattern for new features and updated XAML views with new UI elements.
- Integrated REST APIs using RestSharp to enable secure authentication and local file download/upload.

AR Volumetric Video Player — Unity3D, C#, Python, Meshlab, FFmpeg, Google Play Console

Augmented Reality mobile application

- Built a preprocessing pipeline from PLY to OBJ + PNG, and Draco GLTF + KTX2 with MP4 texture sequences.
- Implemented Draco GLTF sequence import and instancing into Unity meshes.
- Built real-time MP4 frame-to-texture extraction for mesh texturing.

iProduce — Unity3D, C#, Mirror Networking

AR/VR product configurator and collaboration tool

- Owned and maintained WebGL, Android, and HoloLens versions of the application.
- Implemented SSO token-based authentication via C#–JavaScript browser interaction.
- Implemented QR code scanning with ZXing.Net for 3D model downloads.
- Built a proof of concept for ownership exchange between LAN clients to manipulate shared GameObjects via Mirror.

ARIBFA — Unity3D, C#, Microsoft HoloLens

Augmented Reality AEC application

- Designed a 3D AR menu system for IFC data visualization/editing and AR text annotation of BIM MEP components.
- Built JSON serialization for annotation data and integrated RESTful services for location/annotation sharing.

ActiVatoR — Unity3D, C#, HTC Vive

- VR educational game: built NPC behavior logic and ballistic projectile movement using Unity3D coroutines.

EDUCATION

BS, Informatics — Humanistic Informatics — Ionian University Corfu, Greece

Thesis: FPS game for the web using Microsoft's BabylonJS.

SKILLS

Languages: Proficient: C#, Java, JavaScript — Familiar: C++, Python

Tools & Frameworks: .NET, WPF, XAML, Unity3D, Mendix, PostgreSQL, Docker, Git, Visual Studio, Postman, Bash
